An immunogenic fragment of PA, pCPA, can be used to produce an immune response which protects an animal against lethal injection with Bacillus anthracis. DNA encoding the B. anthracis PA can be used in conjunction with DNA encoding the lethal factor (LF) in a DNA vaccine. Using a DNA vaccine which encodes the mutated LF protein or fragment alone or in components (humoral and cell-mediated) of the immune system are stimulated, which results in longer term immune memory response. The component of a mutated LF and PA gene or their fragments response. The higher level of immune response, as judged by overall serum antibody titers for LF and PA antigens, than the use of either LF or PA genes in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        720
                                                                                                               The invention provides a recombinant DNA construct that comprises a vector and at least one nucleic acid (or its fragment) encoding a combination of Bacillus anthracis proteins, selected from protective antigen (PA), MAT-PA (PA with its secretory signals replaced with those of tissue plasminogen with its secretory signals replaced with those of tissue plasminogen activator) and PAG3 (63 KDa PA). The construct is useful as a DNA vaccine for anthrax and in producing infectious alpha virus particles. These particles, expressing the B. anthracis proteins are useful also as useful for analyzing the effectiveness of drugs and agents that inhibit anthrax or B. anthracis proteins. The present sequence represents a B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 240

The invention provides a recombinant DNA construct that comprises a vector and at least one nucleic acid (or its fragment) encoding a combination of Bacillus arthracis proteins, selected from protective antigen (PA), MAT-PA (PA with its secretory signals replaced with those of tissue plasminogen activator) and RAS3 (63 KDa PA). The construct is useful as a DNA vaccine for anthrax and in producing infectious alpha virus particles. These particles, expressing the B. anthracis proteins are useful also as useful for analyzing the effectiveness of drugs and agents that inhibit anthrax or B. anthracis proteins. The present sequence represents a B. anthracis proteins. The present sequence represents a B. anthracis proteins. The present sequence represents a B. anthracis Proteins. for anthrax, in producing inhibiting anthrax. abinant DNA construct useful as vaccines for cells for analyzing the drugs and agents Disclosure; Page 34; 35pp; English

The invention provides a recombinant DNA construct that comprises a vector and at least one nucleic acid (or its fragment) encoding a combination of Bacillus arthracis proteins, selected from protective antigen (PA), MAT-PA (PA with its secretory signals replaced with those of tissue plasminogen with its secretory signals replaced with those of tissue plasminogen for anthrax and in producing infectious alpha virus particles. These particles, expressing the B. anthracis proteins are useful also as vaccines for anthrax. Host cells transformed with the construct are useful for analyzing the effectiveness of drugs and agente that inhibit anthrax or B. anthracis proteins. The present sequence represents a B. ö QSAIWSGFIKVKKSDEYTFATSADNHVTMWVDDQEVINKASNSNKIRLEKGRLYQIKIQY 120 QSAIWSGFIKVKKSDEYTFATSADNAVTWWVDDQEVINKASNSNKIRLEKGRLYQIKIQY 148 09 89 661 720 721 Recombinant DNA construct useful as vaccines for anthrax, in producing host cells for analyzing the drugs and agents inhibiting anthrax.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to antibacterial agents comprising mutant forms of pore-forming toxins (AAMS2113 and AAMS1464-AAMS1500), especially mutants in the B moiety of the pore-forming binary A-B anthrax toxin, where the B moiety is anthrax protective antigen (PA) and using these mutants or compositions of them for protecting against Bacillus anthracis infections in humans, especially as vaccines. Note: The present sequence is not given in the specification but is derived from the Bacillus anthracis wild-type PA protein sequence shown in figure 13 (AAMS1483)

The invention relates to antibacterial agents comprising mutant forms of pore-forming toxins (AAMS113 and AAMS1484-AAMS180), especially mitants in the B moiety of the pore-forming binary A-B anthrax toxin, where the B moiety is anthrax protective antigen (PA) and using these mutants or compositions of them for protecting against Bacillus anthracis infections in humans, especially as vaccines. The present sequence is that of the anthrax PA protein

The sequence encoding the protective antigen of Bacillus anthracis may be used in the construction of a nucleic acid which encodes a fusion protein comprising the anthrax protective antigen binding domain of the native anthrax lethal factor and a sequence encoding an activity inducing domain of a second protein. The fusion proteins are useful for the specific filling of tumour cells or the killing of cells infected with intracellular pathogens, especially HIV. (Updated on 25-MAR-2003 to correct PN field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   720
in the B moiety of the pore-forming binary A-B anthrax toxin, where the B moiety is anthrax protective antigen (PA) and using these mutants or compositions of them for protecting against Bacillus anthracis infections in humans, especially as vaccines. Note: The present sequence is not given in the specification but is derived from the Bacillus anthracis wild-type PA protein sequence shown in figure 13 (AAM51483)
                                                                                                                                                                                                                                                                                                                                                                     180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   300

```
The invention relates to antibacterial agents comprising mutant forms of pore-forming toxins (AAMS213 and AAMS1800), especially mutants in the B moiety of the pore-forming binary A-B anthrax toxin, where the B moiety is anthrax protective antigen (PA) and using these mutants or compositions of them for protecting against Bacillus anthracis infections in humans, especially as vaccines. Note: The present sequence is not given in the specification but is derived from the Bacillus anthracis wild-type PA protein sequence shown in figure 13 (AAMS1483)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to antibacterial agents comprising mutant forms of pore-forming toxins (AAMS1213 and AAMS1484-AAMS150), especially mutants in the B moiety of the pore-forming binary A-B anthrax toxin, where the B moiety is anthrax protective antigen (PA) and using these mutants or compositions of them for protecting against Bacillus anthracis infections in humans, especially as vaccines. Note: The present sequence is not given in the specification but is derived from the Bacillus anthracis wild-type PA protein sequence shown in figure 13 (AAMS1483)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       720
moiety is anthrax protective antigen (PA) and using these mutants or compositions of them for protecting against Bacillus anthracis infections in humans, especially as vaccines. Note: The present sequence is not given in the specification but is derived from the Bacillus anthracis wild-type PA protein sequence shown in figure 13 (AAM51483)
                                                                                                                                                                                                                                                                                                                                                                                                                                            120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         600
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    720
in the B moiety of the pore-forming binary A-B anthrax toxin, where the B moiety is anthrax protective antigen (PA) and using these mutants or compositions of them for protecting against Bacillus anthracis infections in humans, especially as vaccines. Note: The present sequence is not given in the specification but is derived from the Bacillus anthracis wild-type PA protein sequence shown in figure 13 (AAM51483)
                                                                                                                                                                                                                                                                      120

```
The invention relates to antibacterial agents comprising mutant forms of pore-forming toxins (AAMS213 and AAMS1800), especially mutants in the B moiety of the pore-forming binary A-B anthrax toxin, where the B moiety is anthrax protective antigen (PA) and using these mutants or compositions of them for protecting against Bacillus anthracis infections in humans, especially as vaccines. Note: The present sequence is not given in the specification but is derived from the Bacillus anthracis wild-type PA protein sequence shown in figure 13 (AAMS1483)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120

Anthrax, PA, protective antigen, antibacterial, pore-forming toxin, B moiety, A-B anthrax toxin, Bacillus anthracis, vaccine, mutant, mutein. Protecting humans against anthrax using mutant B groups (anthrax protective antigens) of the pore-forming binary A-B toxin of Bacillus /note= "Wild-type Asp substituted by Lys" Location/Qualifiers 04-MAY-2001; 2001WO-US014372. Claim 4; Page; 77pp; English. 04-MAY-2000; 2000US-0201800P. (first entry) Collier RJ, Sellman BR; Anthrax PA mutant D425K. (HARD) HARVARD COLLEGE. WPI; 2002-017725/02. Key Misc-difference 425 Bacillus anthracis. WO200182788-A2 01-FEB-2002 08-NOV-2001 anthracis. Synthetic

The invention relates to antibacterial agents comprising mutant forms of pore-forming toxins (AAMS213 and AAMS1800), especially mutants in the B moiety of the pore-forming binary A-B anthrax toxin, where the B moiety is anthrax protective antigen (PA) and using these mutants or compositions of them for protecting against Bacillus anthracis infections in humans, especially as vaccines. Note: The present sequence is not given in the specification but is derived from the Bacillus anthracis wild-type PA protein sequence shown in figure 13 (AAMS1483)

The invention relates to antibacterial agents comprising mutant forms of pore-forming toxins (AAM52113 and AAM51804-AAM51500), especially mutants in the B moiety of the pore-forming binary A-B anthrax toxin, where the B moiety is anthrax protective antigen (PA) and using these mutants or compositions of them for protecting against Bacillus anthracis infections in humans, especially as vaccines. Note: The present sequence is not given in the specification but is derived from the Bacillus anthracis wild-type PA protein sequence shown in figure 13 (AAM51483)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SEVHGNAEVHASFFDIGGSVSAGFSNSNSSTVAIDHSLSLAGERTWAETMGLNTADTARL 360
